Lab 2 - Implement a form validation using JavaScript.

Auth.java

//querySelectorAll - used to find all HTML elements that match a CSS selector.

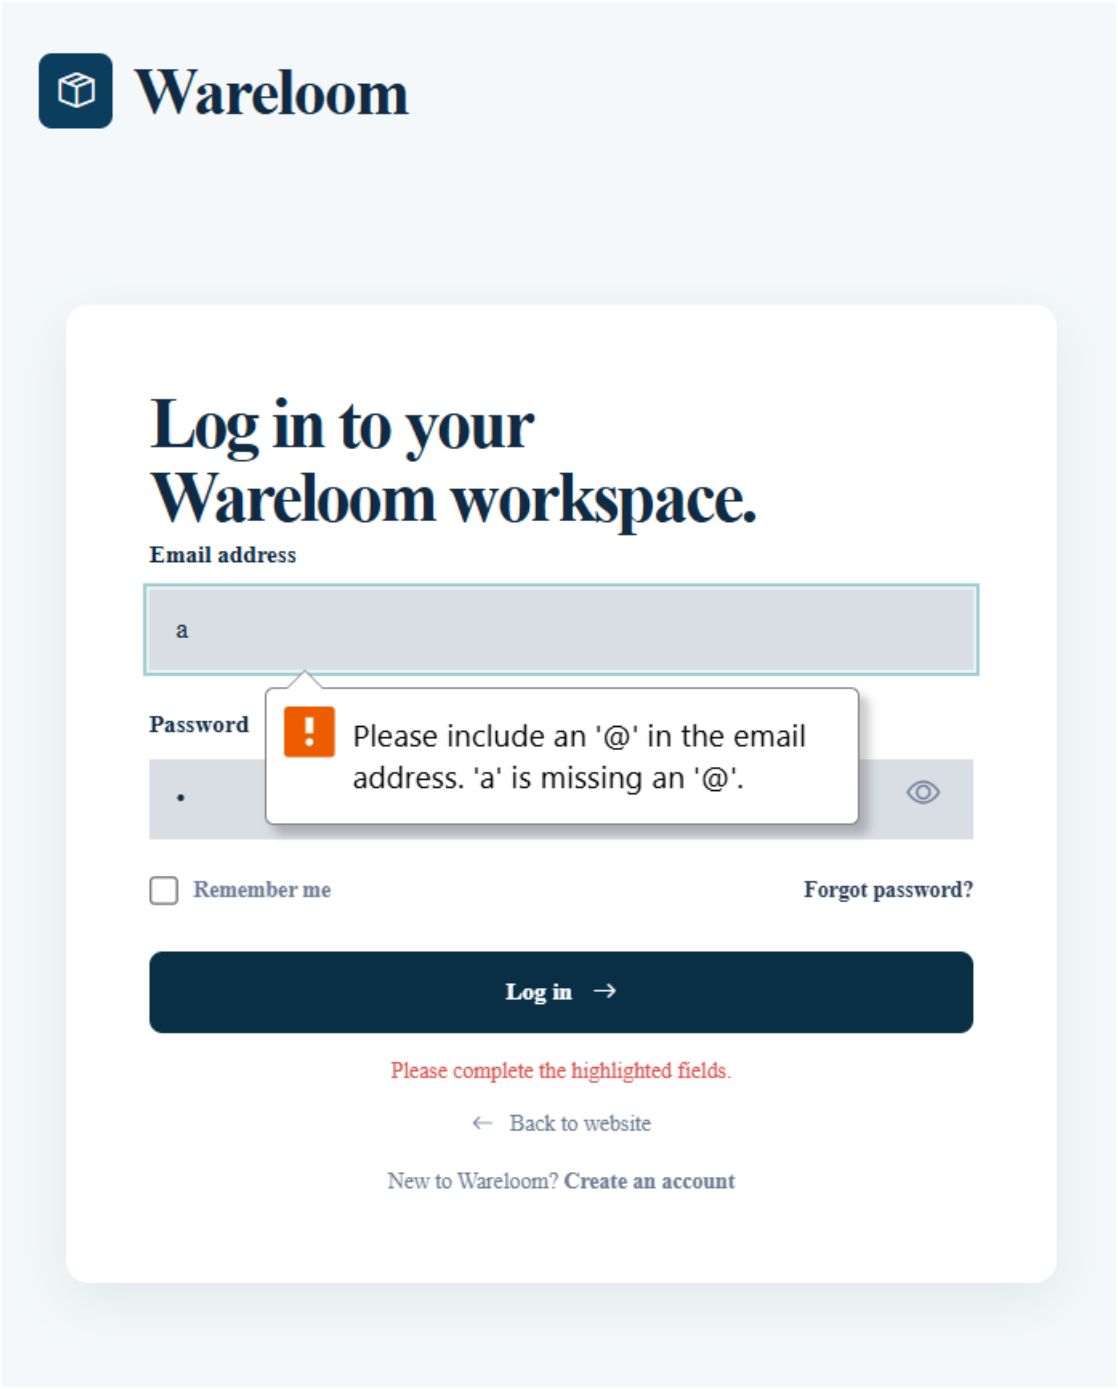

//previousElementSibling - used to get the HTML element immediately before the current element at the same level in the HTML structure

```
document.querySelectorAll('.toggle-password').forEach((button) => {
  button.addEventListener('click', () => {
    const field = button.previousElementSibling;
    if (field.type === 'password') {
      field.type = 'text';
      button.firstElementChild.className = 'bi bi-eye-slash';
    } else {
      field.type = 'password';
      button.firstElementChild.className = 'bi bi-eye';
    }
  });
});
```

```
document.querySelectorAll('form').forEach((form) => {
